

Genpact Acquires XponentL Data to Accelerate AI-Led Innovation

Genpact has acquired XponentL Data, a data products and AI solutions provider, marking a strategic step forward in strengthening its advanced technology and AI capabilities. The acquisition further reinforces Genpact's pivot toward becoming an AI-first organization focused on delivering scalable, data-driven outcomes for clients.

XponentL Data brings strong capabilities in data strategy, design, and engineering, along with deep industry expertise and proven solutions across leading platforms such as Databricks, AWS, and Microsoft Azure. These strengths will enhance Genpact's ability to support clients across the full AI transformation lifecycle—from strategy and architecture to implementation and scale.

The combination strengthens Genpact's position in the emerging agentic AI landscape by integrating XponentL's domain-led innovation with Genpact's global delivery model, process intelligence, and enterprise-scale execution capabilities. Together, the organizations will accelerate the development of AI-powered solutions that improve operational efficiency and drive measurable business impact.

XponentL Data will continue to operate as part of Genpact following the acquisition, with all employees transitioning into Genpact. The organization will continue under its current leadership, ensuring business continuity for clients and stability for teams. The integration will be executed in a structured and phased manner, with a strong focus on leveraging existing talent, strengthening capabilities, and aligning with Genpact's global operating model. This acquisition reflects Genpact's ongoing commitment to investing in people, building future-ready capabilities, and creating long-term growth opportunities within the combined organization.
